Overview (max 250 words)

DNV GL conducted a series of ongoing studies examining the various issues around removal of the topsides and jacket structures, as the client was appraising options for two Northern Platforms, each jacket of which weighed approximately 25,000 Tonnes.

Results (max 250 words)

The studies assessed industry technologies, weather sensitivity, subsea cutting, feasibility of different removal options, onshore disposal yards, alternative platform use, platform access, aids to navigation and marine risks.
