

Nuclear Decommissioning

- Project
 Technology
 Waste Management
 Operator
 Cleaning
 Well P&A
 Disconnection
 Removal & Lifting
 Other (Please Specify)

Company Details	
Company Name	Laslett International Limited
Email	bob.laslett@laslettint.com
Tel no.	07767698543

Overview (max 250 words)

The principals of Laslett International have been involved in the decommissioning of power stations and nuclear sites for over 30 years.

Nuclear (like Offshore) but probably even more so have very significant Environmental Sensitivities which must be taken into account and planned for and managed closely during Decommissioning.

Specifically, the principals and management of Laslett International have been responsible for the Programme Management and Project Controls Support for the Nuclear Decommissioning Authority (NDA). This has included working with the NDA on a decommissioning programme involving 19 civil public sector nuclear sites.

Also we have been involved in the provision of Technical Project Management Services to UK Nirex for decommissioning nuclear facilities.

In addition to the nuclear decommissioning we have been directly involved in the decommissioning of several major power stations including; Battersea, Bankside and West Thurrock Power Stations.

The requirement for professional project management and especially very detailed project planning is as essential in a nuclear decommissioning as it is for an offshore oil and gas facility.

The management process whether for a nuclear or offshore oil decommissioning requires a conceptual assessment of the deconstruction method and a risk assessment associated with all stages of the decommissioning and dismantling process.

The logistics of both nuclear and offshore activity is a major consideration as it is in any nuclear or offshore construction project. The project plan has to incorporate all environmental and safety considerations in order to be able to demonstrate all aspects of the decommissioning for the purposes of regulatory approval.

Challenge (max 250 words)

The challenges faced in decommissioning a nuclear facility are very similar to those in decommissioning and offshore oil and gas production facility. Health and Safety, Security and Environmental figure prominently in both nuclear and offshore oil decommissioning projects. Also the technical challenges concerning engineering, dismantling and disposal are numerous in both nuclear and offshore decommissioning.
