

## Decom Week 2024 – Changing Perspectives

### Meeting demand for future challenges

### Call for Abstracts

**Deadline: 31<sup>st</sup> January 2024**

---

Join us to examine the detail of decommissioning in the energy sector. With increasing demand signals across services, technology and people, what will enable safer and more effective decommissioning through the Energy Transition?

Our agenda will include Decom Mission's first Annual Report, live demonstrations, a dedicated session on well abandonment, indoor and outdoor exhibition space and two days of conference.

And, as we bring the decom community together, we will enable quality networking across diverse activities; golf, cycling and several social events, including our popular annual Decom Mission awards dinner.

---

We are looking for abstracts and case studies across a range of different themes, including but not limited to:

- **The role of technology.** How do we harness advances in technology, artificial intelligence (AI), robotics, cutting edge research, materials science, and digital solutions to facilitate delivery?
- **What have we learned and what do we do with our learnings?** Case studies and commentary that illustrate how the supply network can work well, and how we are currently planning and collaborating to get stuff done in the future.
- **Driving material change.** Let's make a difference - building sustainable careers, tackling decarbonisation, potential changes in regulation and contracting models, learning from others and enabling a circular economy.

**Submissions must be completed and returned to [events@decommission.net](mailto:events@decommission.net) by Wednesday 31<sup>st</sup> January 2024. These will then be reviewed, with selected speakers contacted in due course.**

**ABSTRACT SUBMISSION FORM**
